

OASIS POSTING
MISSILE SITE 345kV SUBSTATION
Date: March 30, 2011

The following is information on the planned schedule for construction of the Missile Site 345kV Substation near Deer Trail, Colorado.

Assumptions:

1. All required permits will be obtained in a timely manner to support the necessary design, procurement and construction schedules.
2. All necessary long-lead equipment will be delivered by the due date on the Purchase Order, and all testing and test reports will be accepted and complete to support the schedule.

Schedule:

1. The Missile Site 345kV Substation is planned to be constructed and capable of being energized by September 3, 2012 (09/03/2012).
2. This includes the installation of one 345/230kV 560MVA autotransformer connected to the existing 230kV substation.
