

Transmission Planner's Modeling Instructions to the Generator Owner (NERC MOD-026-1 & MOD-027-1)

The GO must provide WECC approved dynamic models for each of its generating units. The list of approved dynamic models can be found on the WECC website at the following location: [Western Electricity Coordinating Council](#) > [Committees](#) > [Standing Committees](#) > [Planning Coordination Committee](#) > [Technical Studies Subcommittee](#) > [Modeling and Validation Work Group](#) > [Documents](#) > [MVWG Approved Documents](#)

These dynamic models must be provided in both PSS/E and PSLF format. Further details on the contents and format of these models can be found in the associated PSS/E and PSLF User Manuals. If a GO has an existing applicable unit's dynamic model in the TP's database (as defined in R1), the TP can provide this modeling data to the GO.
